CORPORATE CARBON CALCULATOR

**Priothera SAS from January
2024 to December 2024**

Acting for the climate means first of all identifying and then reducing the greenhouse gases we emit on a daily basis, and on which we can take action at source. This calculation gives you an overview of your greenhouse gas emissions and your main emission sources.

Your emissions amount to approximately

71,41 tCO₂e

To complete your approach, you can financially support CO₂ emission reduction projects with a strong social impact.

The total cost of the contribution of these emissions is
1 999,48 Euros

Your contribution

1 999,48 €

This non-exhaustive calculation can be used to establish a carbon footprint, but does not constitute a Bilan Carbone ®. The MyPlanet teams can support you in your measurement and reduction efforts. Please do not hesitate to contact them at entreprise@goodplanet.org.

Breakdown of emission sources

4,17% in energy

Heating oil: 0 tCO₂e

Electricity: 0,31 tCO₂e

Natural gas: 2,67 tCO₂e

District heating: 0 tCO₂e

Self-consumed
photovoltaics: 0 tCO₂e
Wood (woodchips): 0
tCO₂e

6,23% in travel

Commute: 4,45 tCO₂e
Business: 0 tCO₂e

89,41% air travel

Short haul: 45,2 tCO₂e
Long haul: 18,64 tCO₂e

0% in freight

InfoGES: 0 tCO₂e
Road: 0 tCO₂e
Rail: 0 tCO₂e Air: 0 tCO₂e
Sea: 0 tCO₂e
River: 0 tCO₂e

0,19% in
purchasing

Paper: 0 tCO₂e

Raw materials: 0 tCO₂e

Other purchases: 0,13
tCO₂e

Services: 0 tCO₂e

0% in fixed assets

Buildings: 0 tCO₂e

Vehicles: 0 tCO₂e

Computer equipment: 0
tCO₂e

Based on version 20.0 of the ADEME's Base Carbone ®. This calculation makes it possible to establish a carbon footprint but does not serve as a Bilan Carbone ®.
